## **ELECTRIC SQUARE HEAD™ VIBRATOR TESTS BETTER THAN ROUND HEAD**

The most advanced concrete vibrator ever designed is Wyco Tool Company's Electric Square Head. During a laboratory test, this concrete vibrator compacted the concrete 20-50% faster than the round head vibrator—almost complete compacting was achieved in 15 seconds.

The Electric Square Head vibrator motor has a radial fan giving a cooler motor that lasts longer. It has an end cap that protects the switch; heavy-duty protective frame and aluminum motor housing; and a resilient rubber frame support to absorb impact. The vibrator has a convenient filter location and an optional steel quick-disconnect.

Wyco's Electric Square Head's unique design and materials result in longer brush life. It is safety tested, UL listed and CSA certified.

The Wyco Tool Company offers a complete line of high-performance hydraulic, pneumatic, high-cycle, electric, and gasoline-powered concrete vibrators.
